

# WhispOr

**WhispOr is ADRs latest offering following the success of LogOr.**

WhispOr expands on LogOr by incorporating a GSM Module to enabling data to be sent directly to our website. Users are able to log in and view their water usage. Users are able to set alarms and view the last set of readings recorded, all by simply sending a text message to the WhispOr.

Using a cell phone users can set alarms and view the last set of recorded readings, this is possible by simply sending a text message to the WhispOr.

Designed and built in New Zealand this logger is the perfect tool allowing councils, consultants, industry and the agricultural sector to collect vital information on their reticulation systems and networks.

## Key Features
